

4/14

#### Progress

- Installed and made simple server app with Apache HTTP Server and Java HTTPServer class
- Added logging software to both
  - Apache had a logging module I enabled
  - Wrote directly to a file for Java
- Programmed set of test cases using wget
- Tested to make sure logging worked

#### TODO:

- Program one set of test cases to run against an implementation
  - Use Postman or some other utility that lets you write out contents of request and not just fill in headers
  - Does the logging software modify the server's output
  - Find correct tool
- Apache HTTP Server
  - Log all content instead of just headers

4/21

#### Progress

- Installed Wireshark and configured to use as the logging software (solves issues from last time)
- Wrote test suite using Postman

#### TODO

- Write down text description of tests
- Write C code for sending raw requests
- Write test suite
